ABSTRACT

In 2021, the research group team of the Communication Studies Study Program will conduct research in Hamlet Turgo, Purwobinangun, Pakem, Sleman, with the topic of disaster communication on the community on the slopes of Merapi. The existence of digital technology in disaster communication carried out by Turgo residents has a positive impact on disaster communication because it facilitates and speeds up the delivery of information to the public. However, in fact there are also findings of several Turgo residents who are still vulnerable to exposure to hoaxes from the digital media. Therefore, digital media literacy training is needed for Dukuh Turgo residents so that they have security, skills, and have ethics in digital media. In this training, two main materials were presented, namely being wise and intelligent in receiving information with digital literacy and the importance of communication to create a disaster-resilient society. The training was attended by 21 participants with criteria for actively communicating using smartphones and social media. In addition to presenting the material, the PkM UNY Team provided cases to be solved in groups. Participants were quite active in participating in the activities and hoped that in the future similar activities would be more intense so that they could improve their preparedness in dealing with disasters, in relation to managing disaster information.
