ABSTRACT

In the 21st century and this digital era, all lines of life are experiencing developments, technology, lifestyle and learning in educational subjects. All of these developments that occur are the result of someone's innovation, one example is developments in the world of education. Media and learning resources in schools today are encouraged to be more contextual with students' daily lives. Along with the rapid pace of technological progress, coupled with the Covid-19 pandemic situation which has implications for major changes in learning patterns at the school level, demands changes that can support student learning. Of course this problem is not only a problem faced by teachers, but all stakeholders in the world of education. Teachers as the forefront of education must be supported and facilitated in efforts to improve media and learning resources in schools. For this reason, teachers need to be encouraged to develop media or learning resources that can be done through research and development.

Social Sciences teachers at SMP Batang have a high desire to be able to develop teaching materials and learning media, so in this service training was carried out on research and development methods for Social Sciences Teachers in Batang district. The training method is carried out in a mixed manner both online and offline. Followed by 95 IPS teachers from SMP and MTs in Batang district, and filled with resource persons from the service team
