

Pengembangan Model Festival Olahraga berbasis Sekolah

by Soni Nopembri, Rizki Mulyawan, Saryono, Pasca Tri Kaloka, Hideaki Tanimoto

ABSTRACT

The aim of this research is to develop a school-based sports festival model. This study uses the R&D method through 8 Borg & Gall stages which include research and data collection, planning, product draft development, initial field trials, revision of trial results, field trials, product refinement resulting from field trials and field implementation trials. This study will involve elementary schools in the Yogyakarta and Osaka areas. Data collection was through observation and interviews, accompanied by a combination of additional data obtained from both countries. The school sports festival model developed in this development research was adapted from the school sports festival in Japan called Undokai. According to experts and users, the school sports festival model that has been developed is feasible so that it can be applied to junior high schools by involving all teachers and students. The availability of required facilities and equipment needs to be considered when implementing this model. Choosing the right time for planning and implementing the model can have a better impact on the character of students.
