

TENNIS TALENT GUIDE TEST INNOVATION

by Wisnu Nugroho., Endang Rini Sukamti., Sb. Pranatahadi., Ratna Budiarti

ABSTRACT

The talent scouting test instrument is one of the most important factors in the process of coaching tennis achievement because it is used to identify the talents of tennis athletes. Therefore, a special tennis aptitude test instrument is needed to capture potential athletes from an early age or teenager.

The research objectives are: (1) developing a tennis talent scouting test based on narrative review and expert validation; (2) testing the practicality of the tennis reactive agility test; (3) test the empirical validity of the tennis scouting test

This research method uses a mixture of qualitative and quantitative methods. The number of participants of seven experts was determined by the criteria of an evaluation expert and a tennis expert or both. The research procedure has three stages, namely the first stage, document analysis (international journal) to develop a tennis talent scouting test design. The second stage is content validation. Participants in this stage are seven experts. Data collection techniques using the Delphi technique. This research instrument uses a questionnaire with a rating scale of 1 to 4, namely very relevant, relevant, less relevant, irrelevant. Data analysis used the Aiken formula for content validity.

From the results of the Aiken V table with a rater of 7 (seven) and a scale of 4 (four), the minimum Aiken criteria value is obtained with a range of 0.76-0.90. Based on these results, the tennis scouting test has high content validity, so the tennis scouting test can be used by tennis coaches to conduct an assessment to find out the talent or potential of children in the tennis sport.
