ABSTRACT

Program evaluation is an important part of an education to monitor and see the running of the program. This program evaluation is used to identify the factors that determine the outcome of a program with the aim of making decisions in overcoming the results of the evaluation. The purpose of this study was to analyze the context, input, process, and product of the disability sports district training program in NPC DIY. This study uses a qualitative technique with an evaluation approach using the Context, Input, Process, and Product (CIPP) model. Data was collected using primary data, namely observations, questionnaires/questionnaires, and interviews. Secondary data collection is done through documentation study. The results showed that in: (1) Context Evaluation: having a legal basis, vision and mission as well as very strong and clear goals and objectives (2) Input Evaluation; talent development and identification, athlete recruitment system, community and government funding and participation as well as the existence of very good facilities and infrastructure and running according to the athlete's condition (3) Process Evaluation; the support given to athletes during the match and post-match was well and adequate, the training planning was carried out well, (4) Product evaluation of the achievements of the DIY NPC athletes was very good. There needs to be an increase in cooperation outside the region to improve training programs for athletes
