

# **Urgency of Rehabilitation Repository of Final Projects for Mathematics Education**

**by Endah Retnowati, Ali Mahmudi, Kismiantini**

## **ABSTRACT**

As an effort to realize the scientific vision of mathematics education study programs at bachelor's and master's levels, an analysis of the output of expertise in the field of research is required in the context of final assignments carried out by students. The topic of the final assignment is the result of guidance from study program lecturers and describes the expertise they have. The results of the research show that a mathematics education expertise cluster has emerged. This research is limited to the number of final assignments stored in the repository, so policies to improve the repository system are urgently implemented. In this way, decision making regarding the implementation and achievement of the study program's scientific vision can be carried out more strategically.
