## **ABSTRACT**

Information systems are one of the elements that play a very important role, especially for organizations or companies. The existence of an information system certainly has a positive impact on organizations or companies to carry out the activities of the organization itself. As the organization grows larger, the need for information systems will also increase. The demand for an increasingly good information system is the result of demands for company development, technological developments, government policies, changes in procedures and demands for various information needs of society. In testing the reputation check service information system using black box testing, so we don't need to find out what actually happened in the system or software, what is tested is the input and output. Based on the results of the analysis above, it can be concluded that: (1) the GUI for checking PT Gan's reputation needs to be changed so that it can be sorted properly by users; (2) Proposed Reputation Check Information System from UNY is the most complete, efficient, and easily accessible system for users.

Kata Kunci: *Integrated information system, reputation check, effective efficient system*
