

Developing Online Materials of Introduction to English for Children (EFC) Course in English Language Education Study Program of UNY

by Nury Supriyanti

ABSTRACT

This study aims to develop the Introduction to English for Children (EFC) online course based on students' needs and forum group discussion conducted among lecturers of EFC team. This study applies the Research and Development methodology of which phases refer to simplified ADDIE style which are analysis, design and development. Due to the limited time, this study does not involve the other 2 phases: implementation and evaluation. The start of the research study was the needs analysis in which a survey on the students' needs on their online learning was conducted for the basis of developing the online course of Introduction to English for Children. Accompanying the survey, an intensive study on literature, interviews with EFC lecturers and students were also conducted. The outcome of this study is RPS of the Introduction to English for Children and e-learning model on BeSmart learning management system.
