

ANALYSIS OF RESEARCH RESULTS ON THE IMPACT OF COVID-19 ON LEARNING and LEARNING PROCESS IN INDONESIA

by Dwiyanto Djoko Pranowo, Roswita Lumban Tobing, Herman

ABSTRACT

Abstract

Many studies on the impact of COVID-19 on teaching and learning activities have been carried out. Unfortunately, there are no conclusions from all these primary studies, so it is necessary to conduct a literature study in order to obtain comprehensive information. This study was conducted through the study of several literatures from research journals regarding the impact of COVID-19 on teaching and learning activities. The purpose of this study was to identify and analyze the impact of the impact of COVID-19 on the education sector through a study of research results. The method used is a literature study. The data sources are journal articles of research results for the year 2020-2021 which are published via the internet. Through the help of google search, a sample of research data was obtained. The hope is that adequate data and information will be available in making a map of the impact of COVID-19 on classroom learning. The research data will be identified, tabulated and categorized based on the type of research, education level, population-sample, research methods and approaches and research results. With qualitative data analysis, comprehensive conclusions can be obtained about the impact of covid-19 in the field of learning in Indonesia.

Kata Kunci: *covid-19, learning, impact*
