

INCREASING PRODUCTION OF COCOS NUCIFERA WASTE BUTTON SHOP BUSINESS IN PENDOWOHARJO VILLAGE

by Anggi Tias Pratama, Bayu Rahmat Setiadi, Ruliaya Puspitaningrum Mamengko

ABSTRACT

Abstract

Cocos Nucifera button craft is a raw material used in knitting fashion bags, wallets, tablecloths, lampshades, and so on. One of the craft business units in Pendowoharjo Village, Bantul Regency that still exists is the Small and Medium Enterprises (UKM) Self-Help Group (KSM) YB Craft. This group is chaired by Mr. Akhyani with 25 members scattered around the business location. The problems faced by partners are the problems of production and marketing technology. This settlement is carried out in two stages, namely in the first year solving technology problems and in the second year solving marketing problems. This problem is the result of in-depth interviews with the service team and partners. Partner problems related to technology are many machines that are damaged and not maintained, especially in the manufacture of buttons. The solution to partner problems for the first year of production technology problems is that partners are provided with 3 units of coconut shell mosaic cutting machines for wall decoration. Partners are provided with training and machine operation as well as machine maintenance and repair. The partner settlement method is carried out in 5 main stages, namely: the collaboration stage, technology design, training, activity evaluation, and operational assistance. The sustainability of PKM activities is carried out by the service team and partners in solving the main partner problems that have not been covered in this PKM activity. The targets that have been achieved are 70% of the implementation of activities and 70% of the absorption of the budget. The results achieved are the draft IA and the industrial design/patent draft of a two-slice cutting machine with the clamping method.
